Date	07 July 2026
Team ID	
Project Title	Personalized Networking Assistant
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

The proposal report aims to transform loan approval using machine learning, boosting efficiency and accuracy. It tackles system inefficiencies, promising better operations, reduced risks, and happier customers. Key features include a machine learning-based credit model and real-time decision-making.

Project Overview	
Objective	To empower event attendees with instant context-aware tools using advanced language modeling pipelines, maximizing communication performance.
Scope	Designing a full-stack system incorporating automated text analysis, contextual chat starter generation, and a real-time validation lookup component.
Problem Statement	
Description	Professionals experience networking friction because parsing large, technical event text manually to build structured talking points on the fly is highly inefficient.
Impact	Leads to missing high-value career opportunities, diminished professional networking confidence, and poor event satisfaction.
Proposed Solution	
Approach	Employing zero-shot classification and text-generation models to create an on-demand conversation generator layer, turning messy descriptions into smart talking scripts.
Key Features	AI-driven theme analysis using DistilBERT.

	● Custom context-aware conversational icebreakers powered by GPT-2. ● Instant Wikipedia text validation search metrics for technical terminology validation.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU/GPU specifications	T4 Cloud GPU allocation
Memory	RAM requirements	8.0 GB RAM minimum
Storage	Space for libraries & local files	256 GB SSD allocation
Software		
Frameworks	Web & API Frameworks	FastAPI (Backend), Streamlit (Frontend)
Libraries	Machine Learning & Utilities	transformers (Hugging Face), torch, wikipedia-api, pytest, httpx
Development Environment	Core Editors	PyCharm, VS Code
Data		
Data	Inputs and Local Storage	Live User Input Text, Wikipedia Text Corpora, local history/feedback JSON strings
