Project Name	Personalized Networking Assistant
Maximum Marks	5 Marks

Solution Architecture Diagram:

Provide a high-level visual representation of your solution's architecture. Use the structural layout below as a template to map out your Presentation Layer, Application Layer, and Data Layer. Fill in the specific technologies and components for your project directly into the boxes to create your architectural diagram.

Component Description Table

Component Name	Description / Role in Architecture	Technologies Used
Presentation Layer	Renders the web interface, text entry sections, and metric dials. Manages current user session views and button click loops.	Streamlit framework with custom CSS injection blocks.
API Gateway / Backend Layer	Exposes RESTful paths (/analyze-event, /generate-conversation, /fact-check). Orchestrates model calls and persists request analytics.	FastAPI framework running on an asynchronous loop.
Microservices / NLP Core	Parses inputs to generate contextual outputs. Classifies underlying topics and compiles 2–3 personalized networking openers.	Hugging Face pipelines loaded with DistilBERT and GPT-2 Small model checkpoints.
External Integrations	Validates user search terms against external data sources by fetching relevant lookup articles.	Public Wikipedia API Wrapper .
Database / Storage Layer	Stores query historical sequences and click interaction tallies without complex database configurations.	Local structured text objects: history.json and feedback.json .
